

Bio 30.1

Goals: Understand fungi and how they are classified. Are they considered to be plants? Why or why not?

Plan:

Video: fungi and their classification

Reading: 13.4: Fungi

HW: Complete review questions (page 322 of pdf file)

Bio 30.2

Goals: Explore how fungi can act as pathogenic or parasitic in nature

Plan:

Design a horror/thriller movie poster or book cover for a fungus of your choice that can be parasitic or otherwise detrimental to another organism. Include the following:

- The name of your organism somewhere in the title
- Illustration of the fungus itself or the other organism it affects
- A tagline (description) describing the scary things it does to that organism
- At least two quotes from fictional critics describing something scary or interesting
- Can be colored or a line drawing. I am not grading on artistic realism, but on your creativity with your subject. (you can attempt artistic realism if you want)
- Use your reading for reference, as there are several parasitic types shown there. Otherwise, you may use other reputable resources

HW: movie poster/book cover
