

EnSci 33.1

Goals: Discuss how the recent events have affected our behaviors, the overall effect on the environment

Plan:

Use the EPA's carbon footprint calculator to determine your household footprint

<https://www3.epa.gov/carbon-footprint-calculator/>

You may estimate numbers, but make it as close to your actual usage.

- Determine your footprint both as it would be now (with current traveling) and what it would have been prior to recent lifestyle changes

EnSci 33.2

Goals: discuss the difference in carbon footprint numbers and how our changes in behavior make a difference environmentally

Bellwork: Share your two numbers, before and after stay at home

Discussion: difference and how it has affected carbon footprints around the globe

HW: Reflection: What do you think will happen to carbon footprints when the stay at home orders are lifted? Why?
